Test&Measurement

High accuracy and sample rate

DM7560 Digital Multimeter

Precision Making

Bulletin DM7560-01EN

For a long time, a DMM has been a fundamental instrument on an engineer's bench due to its superb versatility for a wide range of electronic applications. As more precise measurement of basic electrical values is required, particularly for new technologies such as fuel and solar cells, DMMs need to have higher performance.

The DM7560 provides high sampling rates of up to 30 kS/s with high accuracy and provides all the basic functions of a Digital Multimeter. With its capability to monitor transitional voltage variations, it can be applied to a wide range of applications.

The DM7560 provides:

Stability – As a $6\frac{1}{2}$ digits benchtop DMM, the DM7560 provides excellent stability and reliability. It keeps its good performance even at high sampling rates.

Visibility – As one of the most advanced bench-top DMMs, The DM7560 provides various display formats. This contributes to intuitive and comprehensive operation in today's demanding measurement scenarios.

Productivity – With a wealth of I/O and communication interfaces, and advanced analysis functions, the DM7560 helps to improve productivity of a wide range of automated testing systems.

Main features

- · Full-color, high-resolution display with flexible display formats
- High-speed data logging with up to 30 k points per second
- · High-capacity internal memory up to 100 k points
- Trend / histogram analysis available both in real-time and offline
- Multiple PC interface options (USB, Ethernet, GP-IB, RS-232) enable automation

Application examples

- Monitoring battery current consumption
- Sensor testing
- Production testing
- R&D/service
- Voltage reference testing

Front panel

Flexible display formats

A large 4.3-inch high-resolution display provides comprehensive data observation using a flexible combination of primary and secondary display areas.

Display combination examples

Trend chart + Statistics

The DMM7560 can show different types of visualizations on the display. In this case, the top displays a time-domain trend plot and the lower region displays statistics of this data.

Numerical value + Frequency + Analog meter Users can display the input signal voltage and frequency side-byside with numeric values and indicators.

High-speed data logging

Maximum 30 kS/s data logging rate

In bulk mode, data can be logged to the internal memory with high sample rates of up to 30 kS/s. Data logged to the memory can be copied to a USB memory device and analyzed on the PC.

*When DCV, DCI, 2 W Ω , 4 W Ω functions.

Setting the DM7560 to 30 kS/s enables users to see the details of a 10 ms pulse width on a 2 Vpp measurement.

High-capacity memory

An internal memory of 100 k points enables long-term, high-resolution data logging even for high sample rates. Continuous measurement of over 27 hours is possible with a sample rate of 1 S/s.

Available logging time at each sampling rate

Sampling rate (S/s)	1	1 k	30 k
Logging time (h:m:s)	27:46:40	0:01:40	0:00:03

Triggered data logging

Trigger events such as the measured LEVEL, LIMIT or EXTERNAL TRIGGER can stop logging. Users can specify the amount of data to store after an event occurs.

SIGNAL LEVEL events can stop data logging.

PC-based analysis

Users can transfer stored data to a PC file for detailed analysis.

Offline data analysis in the DM7560

DM7560 provides powerful analysis functions for logged data in the internal memory without using a PC.

Yield rate measurement

By setting upper and lower limit values as the cursor position on the histogram display, users can display the number of data, ratio to whole data (%) and yield rate.

Yield rate and other calculations are available using cursor controls on the histogram display.

Time trend analysis

In the trend chart, statistic data in a selected time range can be calculated.

Statistical data such as the MAX/MIN/AVG of a cursorspecified range is calculated automatically.

In-depth analyses

Users can easily zoom to see a magnified part of a trend chart or display the zoomed region as a histogram.

04704 15:33:0

Histogram display of the voltage distribution

Zooming in a part of the trend chart

Productivity improvement

Judgment (GO/NO-GO) result analysis

Both the histogram and trend chart can display LIMIT judgment results. The number of captured NO-GO results is displayed in the histogram display, and the timing when NO-GO results were captured is clearly displayed in the trend chart.

Display in large fonts

Easily seen from a distance.

Setup control by PLCs

The DM7560 can store/recall up to 10 setups through the optional RS-232 interface to enable flexible control of the instrument from a PLC.

Signal output according to LIMIT judgment

A LIMIT judgment result can be output as a signal from the DIO terminals (option) for simplified implementation of automated test systems.

SCPI-compliant remote control

In addition to the standard USB interface, Ethernet, RS-232 and GP-IB are also available and control is available through industry-standard SCPI commands.

Rear panel

*The figure is an example for /C1/CMP options

Specifications

Basic measuring function

The specifications below are under the following conditions and definitions: Temp./humid.: 23±5°C, 80%RH or less

Specifications are valid for 1 year.

Response time: Time that measurement enters into the accuracy in each range The unit of Tempco* of ACV and ACI functions is ±(% of reading + % of range) /°C *The word of "Tempco" means the temperature coefficient in this bulletin.

Common specifications

Measurement method Delta-sigma A/D converter

Measurement mode Trigger setting mode AUTO/SINGLE (selectable) Range Selectable from AUTO RANGE/MANUAL RANGE

AUTO range: The range is increased when the value exceeds "1199999", and decreased when the value falls below "100000".

time	Display digit number and measuring range	3 to 5 Hz	5 to 10 Hz	10 to 40 Hz	40 Hz to 300 kHz
1 s	7 digits: 3.000000 Hz to 300.0000 kHz				0.01
100 ms	6 digits: 3.00000 Hz to 300.000 kHz	- 0.1	0.05	0.03	
10 ms	5 digits: 3.0000 Hz to 300.00 kHz	- 0.1			0.01
1 ms	4 digits: 3.000 Hz to 300.0 kHz	-			

· Maximum allowable voltage: 750 Vrms, or 1100 Vpeak (continuous), however DC content is ±500 V or less

· An input attenuator is the case when 100 mV to 750 V range of ACV is switched automatically or manually. • An input range is 100 mVrms to 750 Vrms at 3 Hz to 100 kHz. However up to

maximum 2.2 × 10⁷ [V·Hz] in 100 kHz to 300 kHz.

• Up to 100 kHz when input is 200 Vrms or more.

• In the input 3 Hz or less and more than 300 kHz, measuring and display may be performed but it is out of accuracy guarantee.

Trigger function

00	
Trigger mode	AUTO: Measures automatically in accordance with sampling rate and interval. SINGLE: Measures in accordance with TRIG input
Trigger source	Rear TRIG input terminal: Polarity and valid/invalid are switchable by menu HOLD/TRIG key: Enters by key manually REMOTE: Operated by remote commands
Trigger sample number	Sets the number of continuous data measurement per one trigger Setting range: 1 to 100000
Trigger delay	Sets delay time from TRIG input to data measurement Setting range: 0.00 ms to 3600 s (Resolution: 10 μs)
Interval	Measuring interval setting of sampling. This is valid when larger value than current sampling rate is set. Setting range: 0.00 ms to 3600 s (Resolution: 10 µs)

Calculation function

Simultaneous setting is possible except for combination of scaling and decibel calculation.

SMOOTHING (Moving average) calculation

Average Selectable in range of 2 to 100 (positive integer). In case trigger is SINGLE, after it reaches the set average count, required trigger sample quantity is obtained.

NULL (Difference) calculation

Calculation	Calculation result = RAW value – NULL value RAW value: Measured value of function at that time NULL value: Stored value set by the following operation
Setting	Calculation ON/OFF On/Off are set by [NULL] key or NULL menu of each function. When turning on with the NULL key, the measured value at that time is set to NULL value of each function.
	NULL value setting It is possible to set it by three kinds (DEFAULT value, measurements, and a numeric input) when setting according to the NULL menu of each function. Numerical setting by NULL VAL menu of each function manually. With multiplier (p, n, μ, m, k, M, G, T), effective figures 7 digits.
Scaling (S	SCALING) calculation

Calculation formula Selectable from the following two formulas: • Display value = $\frac{(measured value - A) \times B}{C}$ • Display value = $\frac{D}{measured value}$

Constant The 4 constants of A, B, C, D are set. With multiplier (p, n, μ, m, k, M, G, T), effective figures 7 digits.

dB calculation

Calculation Selectable from dBm and dBV:

dBm	Calculation result = $10 \cdot \log_{10} \left\{ \frac{\left(\frac{\text{measured value}^2}{\text{standard resistance}}\right)}{(1.0 \times 10^{-3})} \right\}$
	Standard resistance value: Selection of 4, 8, 16, 32, 50, 75, 93, 110, 124, 125, 135, 150, 200, 250, 300, 500, 600, 800, 900, 1000, 1200, 8000 Ω
dBV	Calculation result = $20 \cdot \log_{10} \left(\frac{ \text{measured value} }{\text{standard voltage}} \right)$
	Standard voltage value: Selection of 1 $\mu\text{V},$ 1 mV, 1 V
RELO	calculation Possible to set by above 2 calculations. Display of different value deducted dB standard value from calculation result.
dB st	andard value Selectable from three types (DEFAULT value, measured value, numeric input). Setting range is ±500.0000 (Seven significant digits)
Appr	poriate function

Appropriate function

Valid only for DCV and ACV functions

STATISTIC calculation

Calculation	Calculates maximum (MAX), minimum (MIN), average (AVE) and standard deviation $\left(\sigma\right)$		
Display	Possible to display on secondary display. The average value curse and the σ cursor are displayed in the histogram chart.		
LIMIT cal	culation		
Judament	ON/OFF	The upper limit and the lower limit can be enabled/	

disabled independently. LIMIT value The upper limit and the lower limit values are set in seven significant digits with eight kinds of multiplier (p, n, µ, m, k, M, G, T) HIGH Measurement value > the upper limit value LOW Measurement value < the lower limit value GO When either or both HIGH judgment and LOW judgment is ON, the state that is neither HIGH nor LOW. Display Trend chart Displays HIGH/LOW marks and threshold line in graphics Histogram Displays HIGH/LOW marks and threshold line in chart graphics LIMIT Displays HIGH/LOW on the primary and secondary

Logging function

judgment

Switchable between 2 modes, NORMAL and BULK

Data size	NORMAL mode: Fixed to 100 k points BULK mode: 1 k, 2 k, 5 k, 10 k, 20 k, 50 k, 100 k points			
Data to be	 Measuren 	• Date and time of logging		
saved	Name of e	each function • Configuration of each function		
	The name of calculation (NULL, dB or SCALING) which is set to ON is displayed.			
Export function	Data can be saved to USB memory			
	File format	Text file		
	Saved data	Measurement value, time stamp (can be set to OFF), attribute information (can be set to OFF)		
	Time stamp format	YYYY/MM/DD HH: mm: SS, xxxxxx (x: units of µsec)		
	Attribute information	The name of calculation (NULL, dB, or SCALING) which is set to ON is saved.		

displays and the upper part of the screen

NORMAL mode

Measurement data is stored in the memory, monitored in real-time. The sampling rate won't be constant.

BULK mode

The sampling rate is kept constant. Measurement data cannot be monitored in real-time. Unavailable in the trigger SINGLE mode.

LOG start	By pressing START LOG mer	nu key
-----------	---------------------------	--------

- LOG stop By 2 methods below:
 - After the STOP EVENT occurs, the data corresponding to the number of post triggers has been completely acquired.
 - By pressing STOP LOG Key
- STOP EVENT

Selectable from the following four events:

- NONE: No condition is specified.
- · EXT TRIG: Makes the external trigger input an event
- LEVEL: When the measurement data exceeds a threshold value
- · LIMIT: Selectable from 4 limit judgment of GO/NOGO/HIGH/LOW

LEVEL setting condition

- Polarity: Selectable from Positive/Negative
 - Threshold: Setting range: 7 digits significant figure with multiplier (p, n, μ , m, k, M, G, T) is used for the setting.

Post readings

Selectable in the 0 to 100% (resolution 1%) of data size

Due to the nature of this product, it is possible to touch its metal parts. Therefore, there is a risk of electric shock, so the product must be used with caution.

*Wire diameter of cables that can connect to the adapter 758923 Core wire diameter: 2.5 mm or less, covering diameter: 5.0 mm 758931 Core wire diameter: 1.8 mm or less, covering diameter: 3.9 mm

For your safety, please use the cable under considering usage voltage.

• Before operating the product, read the user's manual thoroughly for proper and safe operation.

This is a Class A instrument based on Emission standards EN61326-1 and EN55011, and is designed for an industrial environment.

Operation of this equipment in a residential area may cause radio interference, in which case users will be responsible for any interference which they cause.
